

## Livestock Facility Study Group Recommendation Updates June 2023

	Stakeholder to Lead Implementation	Implemented	Denied
<b>Best Practices &amp; Outreach</b>			
<b>Outreach</b>			
1	Notify neighbors of off farm spills or spills impacting surface water as soon as possible but within 24 hours.	Green County Land and Water Conservation Department.	As per a Green County Land and Water Conservation Committee Meeting on November 8, 2018 minutes show this recommendation was not approved.
2	<i>If e. coli contamination is detected, send letters to nearby households that are potentially impacted.</i>	Green County Health Department.	One private water system tested positive for e.Coli in 2020. Working with the owner of the impacted well, followup testing showed it was free of e.Coli/coliform bacteria after well treatment. The well was located in a barn for animal watering and the home water system showed no bacterial contamination so notifying nearby well owners was not warranted. The owner continues to test their wells annually. Letters are also issued by the HD for systems producing water with Nitrate exceeding 10 mg/L and any coliform bacteria detected.
3	<i>Encourage the State Veterinarian and local veterinarians to report to local health officials any known zoonotic (disease) outbreaks.</i>	Green County Health Department.	Health Officer receives regular DTCAP communications, including identified zoonotic outbreaks for surveillance and risk toward human impact.
4	<i>Increase education and outreach to landowners regarding the Wisconsin Manure Runoff Prediction website.</i>	Green County Land and Water Conservation Department and Green County UW-Extension.	The Green County Land and Water Conservation Department does radio programs to promote it and has refrigerator magnets to hand out in the front lobby of their office to promote the Wisconsin Manure Runoff Prediction website.
5	<i>Install warning signage on roads with frequent truck stops for traffic safety.</i>	Green County Highway Department and Green County Sheriff's Department.	Green County Sheriff Department Staff report that they regularly see warning signage where trucks are frequently stopped along Green County roads, particularly where they are pumping animal waste into farm fields.

	<b>Stakeholder to Lead Implementation</b>	<b>Implemented</b>	<b>Denied</b>
<b>6</b> <i>Inform haulers and farmers of requirement that all land applicators have, at a minimum, one set of spreading restriction maps and written instructions present for land application sites where manure is actively being applied.</i>	Green County Land and Water Conservation Department.	As per a Green County Land and Water Conservation Committee Meeting on November 8, 2018 minutes show this recommendation was approved.	
<b>Best Practices</b>			
<b>7</b> <i>Request NRCS to provide incentives for composting, separating, and treating manure.</i>	Green County Land and Water Conservation Department.		NRCS already does this. Recommendation rejected
