

Green County Livestock Facility Study Group

RECOMMENDATIONS BY DEPARTMENT

Green County UW-Extension

Green County UW-Extension was identified as the lead organization for the following recommendations. Recommendation numbers correspond with the numbers within the Livestock Facility Study Group Report & Recommendations document.

COMMUNITY MAPPING & MONITORING (page 25)

MONITORING (page 25)

3. Coordinate well water test results, which are required to be taken every 15 months, to establish water quality trend data.

- Rationale: This can be used to make decisions to reduce groundwater contamination.

- Note: The Green County Land and Water Conservation Department, Green County Health Department, and Green County UW-Extension were all identified as lead stakeholders for this recommendation.

UPDATE AS OF JUNE 2023

After considering this recommendation, the Green County Board budgeted funds to conduct a 5-year groundwater quality trend data program. This work is currently in Year 4 of the data analysis; data has been shared with the well owners and the trend data work will be presented at the Green County Board meeting in June 2023. More information is available online [here](#).

BEST PRACTICES & OUTREACH (page 27)

OUTREACH (page 27)

4. Increase education and outreach to landowners regarding the Wisconsin Manure Runoff Prediction website.

- Rationale: Increase awareness of weather-related impacts on surface water runoff.

- Note: The Green County Land and Water Conservation Department and Green County UW-Extension were both identified as lead stakeholders for this recommendation.

UPDATE AS OF JUNE 2023
