Green County DHIA December 2023

Upcoming Events

Badger Dairy Insight, Udderly efficient: management strategies for optimal performance, Online Webinar, 11:00am-Noon
Youth for Quality Care of Animals, Green County Justice Center, 10am, register at https:// www.yqcaprogram.org
Green County Fair-Market Beef Weigh-In, Monroe Equity, 8-10am
Badger Dairy Insight, Selection of dairy cows for consistent performance under predictable conditions, Online Webinar, 11:00am-Noon

Economics of Dairy Cattle Hoof Health

Written by: Eric Ronk, Extension Dairy Outreach Specialist and Aerica Bjurstrom, Regional Extension Dairy Educator

When it comes to health issues on a dairy farm, lameness is usually a main concern along with mastitis and reproductive issues. Lameness includes any abnormality which causes a cow to change the way she walks. It can be caused by a range of foot and leg conditions including foot rot, digital dermatitis, laminitis, and claw disease.

Lameness can be influenced by nutrition, disease, genetic influences, management, and environmental factors. Not only does lameness cause pain and distress for dairy cattle, but it also has a large economic impact on the dairy operation. This fact sheet will mainly focus on the economic costs associated with hoof health but it should be noted it can be difficult to put a price on lameness due to several compounding factors. Lameness is commonly identified by locomotion scoring, but it can be difficult to detect until clinical signs are present. There are ranges in the literature stating that a case of lameness can cost \$90 – \$300 (US\$). Even with using \$90 per case, the cost to a 300 cow dairy with a 20 percent incidence rate, would be over \$5,400. Some people associate treatment as the leading cost of lameness, but there are several other areas that cost considerably more money. These include reduced milk yield, reduced fertility, increased labor, and increased risk of culling.

Reduced Milk Yield: A majority of research papers show that clinical lameness reduces milk yield. Lameness can reduce the amount of time at the feed bunk and therefore reduce dry matter intake, which is correlated with milk production. The amount of milk production lost can vary depending whether the study compared lost milk production before or after lameness treatments, affected cows versus unaffected cows, or predicted milk yield. In a study from 2010, Archer et al., found that a severe case of lameness within the first month of lactation could reduce 305-day milk yield by 772 pounds. In a different study from 2008, Bicalho et al., estimated lameness could reduce 305-day milk anywhere from 692 – 935 pounds. The reduction in milk yield also depends on the type of lesion, with a sole ulcer causing the greatest reduction in milk (Table 1). At a milk price of \$15.60 per hundredweight (cwt.) that would amount to a \$198 reduction in milk yield from a single sole ulcer case. Another way to look at this is if a 300 cow herd had a 15 percent incidence rate that could amount to \$8,910 per year in milk loss.

DID YOU KNOW GREEN COUNTY DHIA OFFERS MORE THAN JUST MILK TESTING?

Milk Testing provides the benefits that include milk weights, somatic cell count, butterfat, and protein. Green County DHIA also has the capability to pregnancy check (milk and blood serum); test for Johnes (milk sample); and do A1/A2 testing, BVD, Leukosis, and MUN (milk samples). Mastitis samples can test for 4 or 16 pathogens along with pooled samples. Diagnostics can easily be tested with milk samples pulled on test day.

Description	Price	Sample Type
MUN/Milking Cows	\$.25	Milk
Milk Pregnancy Test 1-10 Samples	\$5.00	Milk
Pregnancy Blood Samples	\$5.25	Blood Serum
BVD	\$5.00	Milk
Johnes	\$5.00	Milk
Leukosis	\$5.00	Milk
Mastititis Contagious 4-Panel (4 Pathogents-detects M bovis, Strep Ag., Staph Aureus, & Strep Uberis)	\$30.00	Milk
Mastitis Complete 16 PCR (16 Pathogens– detects Staph aureus, Strep ag., Prototheca, Staph species, Strep dysgalactiae, Strep uberis, Klebsiella pneumoniae & oxytoca, E coli, M bovis, Corynebacterium bovis, Enterococcus faecalis & faecium, Serratia marcescens, Arcanobacterium pyogenes & Peptostreptococcus indolicus, Steph beta-lactamase gene, Mycoplasma species, and Yeast)	\$40.00	Milk

Dairy record keeping not only benefits the farmer but the cows as well to better understand the herd as a whole and individual cows. Farmers can keep better data and records on cows, calves, heifers and even bulls to improve herd health, genetics, and milk production.
