### Resources for Highly Pathogenic Avian Influenza (HPAI) in Cattle

Submitted by: Jackie McCarville, Regional Extension Dairy Educator

Dairy farmers and the industry should prioritize strategies aimed at prevention, early detection, biosecurity, and effective management to mitigate the spread of this disease and minimize its adverse effects. Below are considerations and resources to help protect animals and humans from HPAI.

#### **Protecting animals from HPAI**

While stopping the transmission of HPAI is complex, several ways exist to protect dairy farms from exposure.

- HPAI virus can be transmitted by waterfowl and other birds, infected cattle, and small mammals (skunks, raccoons, cats).
- Minimize access of wild birds to cattle and their environment.
- Manage the movement of cattle and their transport as much as possible
- Do not feed unpasteurized colostrum or milk to calves, cattle, or other mammals.
- Implement precautions for caretakers and veterinary teams handling sick cows, sick or dead birds, small mammals, and unpasteurized milk
- Separate (quarantine) all new or returning animals for at least 21 days
- Contact your herd veterinarian if increased cow illness is observed in your herd, specifically in 2nd lactation or greater cows that are 150 days or more in milk.

#### **MEET KIM KESTER- Regional Livestock Educator**

My name is Kim Kester and I work as a Regional Livestock Educator for UW-Madison Extension. I graduated from UW-Madison in 2014 with a double major in Dairy Science and Poultry Science. After graduation I worked as a bull herdsman for Accelerated Genetics in Westby, WI. In 2017, I moved to Georgia where I was a county ag agent for over six years, with much of my work focusing on beef heifer development, small ruminants, beekeeping, and tobacco. I recently moved back to Wisconsin to start my new role. I am happy to be back and can't wait to meet livestock producers in the area. To contact me, call 608-228-5400 or email kimberly.kester@wisc.edu.
