

Green County Well Water Monitoring Program

Year 5

Center for Watershed Science and Education
College of Natural Resources
University of Wisconsin-Stevens Point

Extension
UNIVERSITY OF WISCONSIN-MADISON

Through Extension, all Wisconsin people can access University resources and engage in lifelong learning, wherever they live and work. The Center is a partnership between the University of Wisconsin-Stevens Point and University of Wisconsin-Madison Division of Extension.

Nitrate-Nitrogen

Health Effects:

- **Infants Less than 6 months:**
 - Methemoglobinemia (blue baby disease)
- **Women who are or may become pregnant:**
 - Possible links to birth defects and miscarriages (humans and livestock)
- **Everyone:**
 - Thyroid disease
 - Increase risk of certain types of cancers

GOAL of Green County Trend Monitoring: To learn how well water quality changes over time

Is well water quality getting better, worse, or staying the same?

If changing, what can we learn about where and why

This project works best when:

- Wells are representative of diverse geology and land use
- The same wells are sampled every year

WHAT tests were performed?

Nitrate / Chloride

- Useful for understanding land-use impacts on groundwater

Conductivity

- Overall water quality, combination of both land-use, rocks, and soils

Total Hardness / Alkalinity / pH

- Help us understand how rocks and soils impact groundwater

WHERE and HOW many wells?

Initial Recruitment
770 Participants

Yes Respondents
388

2019
Samples Received
348

Modeling of Nitrate Risk

Green County Well Water Sampling Project

- Agricultural Landcover Classification**
- Potato/Vegetable
 - Pasture
 - Hay
 - Dairy Rotation
 - Cranberries
 - Continuous Corn
 - Cash Grain

Source: Wiscland 2.0
Created: Elizabeth Belmont, February 28, 2022

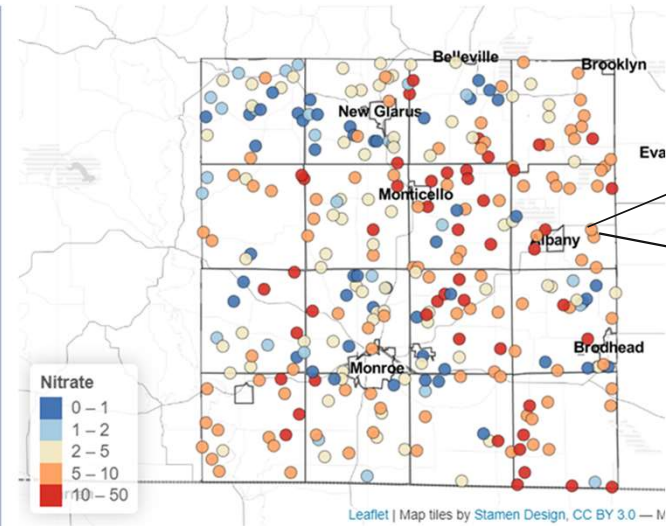

Green County Well Water Sampling Project

- Drainage Classification**
- Excessively drained
 - Somewhat excessively drained
 - Well drained
 - Moderately well drained
 - Somewhat poorly drained
 - Poorly drained
 - Very poorly drained
 - Water

Developing a model from the data

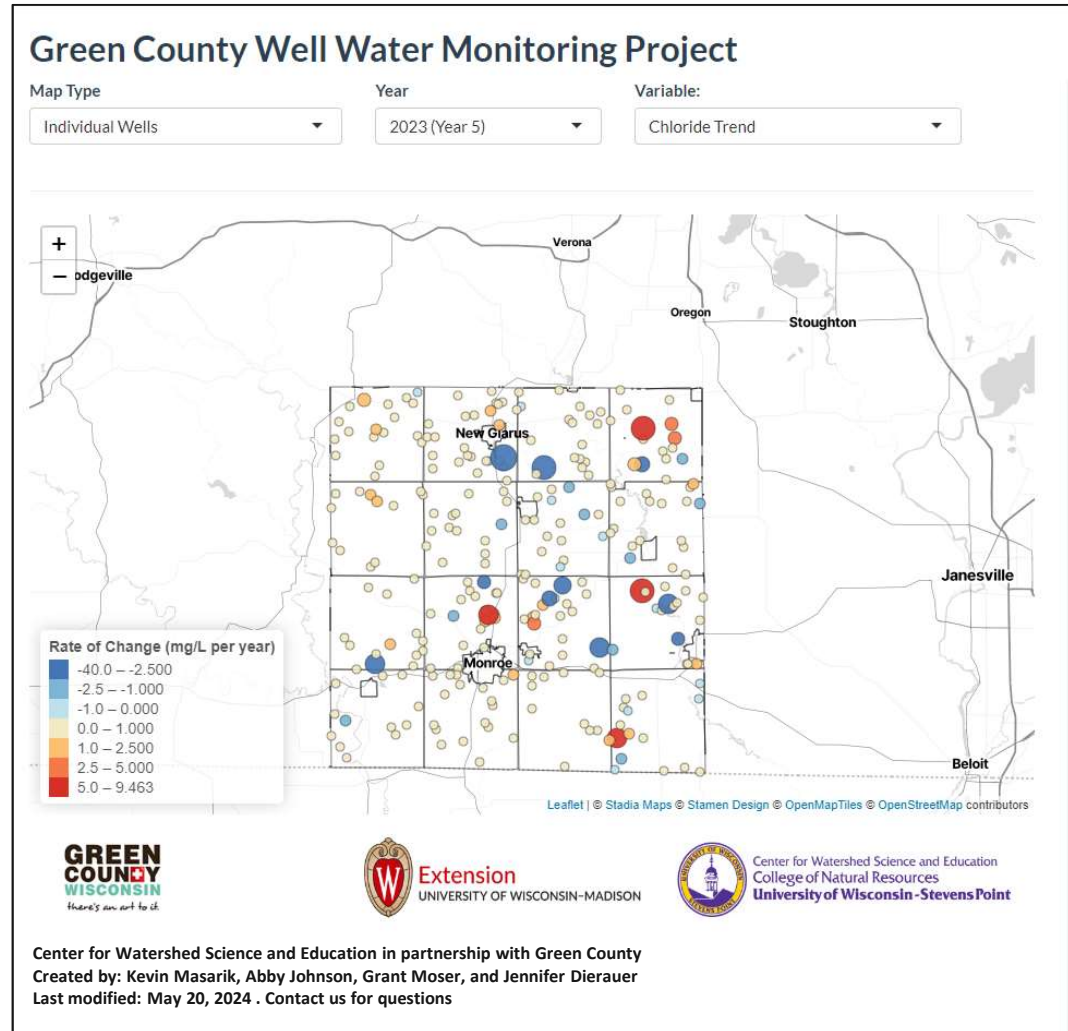

Variable	Model 1	Model 2	Model 3	Model 4
	Coefficients			
Cash Grain	1.695***	1.387***	1.393***	1.241***
Continuous Corn	1.636***	1.561***	1.573***	1.345**
Dairy Rotation	1.730***	1.812***	1.816***	1.796***
Potato/Vegetable	4.290**	4.357**	4.363**	4.971***
Hay	1.604***	1.694***	1.675***	1.574***
Pasture	-0.180	-0.051	-	-
Drainage Rank	0.261***	0.214**	0.216**	-
Depth Below WT	-0.001	-	-	-
Intercept	-0.096	0.141	0.126	1.193***
df	662	746	747	748
R-squared	0.189	0.176	0.176	0.164
p-value	<2.2e-16	<2.2e-16	<2.2e-16	<2.2e-16

Applying that model to Green County

What's next for the project?

- Project extended for 2 more years
- Added tab for Chloride Trends
- Test kits for Year 6 will be sent in October
- Dashboard available online

Strategies to reduce nitrate in groundwater

- Applying fertilizer at the right rate, time, source, place will maximize profitability and minimize excessive losses of nitrogen to groundwater; additional practices may be needed to improve water quality in areas with susceptible soils and geology
- You may not need as much nitrogen fertilizer as you think, conduct your own on-farm rate trials to develop customized fertilizer response curves for your farm
- Utilize conservation incentive programs to take marginal land or underperforming parts of fields out of production
- Diversify cropping systems to include less nitrogen intensive crops in the rotation
- Explore and experiment with the use of cover crops, perennial cropping systems, or managed grazing to reduce nitrate losses to groundwater

Interpreting your chloride test

- Greater than 250 mg/l
 - No direct effects on health
 - Salty taste
 - Exceeds recommended level
- Greater than 10 mg/l may indicate human impact
- Less than 10 mg/l considered “natural” in much of WI

Green County Chloride Results

Chloride Concentrations

Chloride Summary

- <1% of wells tested greater than 100 mg/L
- 35% of wells tested less than 10 mg/L
- **Average:** 19.1 mg/L
- **Median:** 14.6 mg/L
- **Maximum:** 125 mg/L
- **Minimum:** 0.9 mg/L
