### **Ventilation Fan Noise in Dairy Buildings**

### Introduction

Livestock operations include potential noise sources such as mechanical equipment (e.g., tractors, feed pushers, milking machines), ventilation fans, pressure washers, and animals. Routine farm activities such as feeding, cleaning, and vehicle movement all contribute to ambient noise. Studies have measured typical sound levels in animal housing. For instance, the noise inside dairy cattle barns can range from 52 to 83 dB, with higher levels often noted during summer due to increased fan usage. The noise level of a ventilation fan depends on factors such as fan size, type, speed, installation location, and maintenance.

### **How Noise is Measured**

Noise is usually measured in A-weighted decibels (dBA), which accounts for the human ear's sensitivity to different frequencies. Common values for dairy ventilation fans are as follows:

- Circulation fans (basket or ceiling fans): 50–70 dBA
- Low-capacity supply fans (positive pressure tube ventilation): 65-75 dBA
- High-capacity exhaust fans (tunnel or cross ventilation): 70–85
   dBA

Other noise sources in dairy facilities may include:

- Automated milking systems (milking, cleaning, teat attachment): 65-85 dBA
- Feed pushers and automatic feeders: 65–80 dBA
- High-pressure washers for cleaning: 85–95 dBA
- Tractors and skid loaders operating in the barn: 85–105 dBA For reference:
- Normal conversation: 50-60 dBA
- Traffic noise or vacuum cleaner: 70-80 dBA
- Potential for hearing damage with prolonged exposure: 85+ dBA

### **Effects of High Noise Levels**

Good farms are considered to have noise levels of up to 70-75 dBA. Noise levels in dairy buildings can easily exceed 75 dBA, but exposure to these levels should be limited as much as possible.

### **Effects on Cows**

- Dairy cows are sensitive to sound, and excessive noise may increase stress levels, leading to reduced feed intake and altered behavioral patterns.
- Continuous high noise levels (>85 dBA) may contribute to lower milk production and restlessness.

Studies suggest that sudden loud noises can disrupt cow movement and response to milking systems.

### DID YOU KNOW GREEN COUNTY DHIA OFFERS MORE THAN JUST MILK TESTING?

Milk Testing provides the benefits that include milk weights, somatic cell count, butterfat, and protein. Green County DHIA also has the capability to pregnancy check (milk and blood serum); test for Johnes (milk sample); and do A1/A2 testing, BVD, Leukosis, and MUN (milk samples). Mastitis samples can test for 4 or 16 pathogens along with pooled samples. Diagnostics can easily be tested with milk samples pulled on test day.

Description	Price	Sample Type
MUN/Milking Cows	\$.25	Milk
Milk Pregnancy Test 1-10 Samples	\$6.00	Milk
Pregnancy Blood Samples	\$6.00	Blood Serum
BVD	\$7.00	Milk
Johnes	\$7.00	Milk
Leukosis	\$7.00	Milk
Mastitis Contagious 4-Panel (4 Pathogents-detects M bovis, Strep Ag., Staph Aureus, & Strep Uberis)	\$34.00	Milk
Mastitis Complete 16 PCR (16 Pathogens— detects Staph aureus, Strep ag., Prototheca, Staph species, Strep dysgalactiae, Strep uberis, Klebsiella pneumoniae & oxytoca, E coli, M bovis, Corynebacterium bovis, Enterococcus faecalis & faecium, Serratia marcescens, Arcanobacterium pyogenes & Peptostreptococcus indolicus, Steph beta-lactamase gene, Mycoplasma species, and Yeast)	\$40.00	Milk
Single Mastitis (Detects M bovis or Staph aureus)	\$10.00	Milk
A1/A2 Sample Diagnostics	\$10.00	Milk, Blood Serum

Dairy record keeping not only benefits the farmer but the cows as well to better understand the herd as a whole and individual cows. Farmers can keep better data and records on cows, calves, heifers and even bulls to improve herd health, genetics, and milk production.
